

Signup Questionnaire

Implementation copy: questions, response formats, reverse coding, and calculated score for each set.

Backend rule for every block

Require one answer per item before scoring. Preserve raw item answers, calculated score, questionnaire version, and completion timestamp. Use the formulas exactly as written; the reverse-score constant is 6 for 1-5 scales and 8 for 1-7 scales.

Block A - Impulse buying tendency

Backend field: impulse_tendency_score

Response scale: 1 = Strongly disagree; 5 = Strongly agree

1. I often buy things spontaneously.
2. "Just do it" describes the way I buy things.
3. I often buy things without thinking.
4. "I see it, I buy it" describes me.
5. "Buy now, think about it later" describes me.
6. Sometimes I feel like buying things on the spur of the moment.
7. I buy things according to how I feel at the moment.
8. I carefully plan most of my purchases. (R)
9. Sometimes I am a bit reckless about what I buy.

Scoring method: Reverse item 8: scored_8 = 6 - response_8. Score = (responses 1-7 + scored_8 + response 9) / 9.
Valid output: 1-5.

Block B - Self-control

Backend field: self_control_score

Response scale: 1 = Not at all like me; 5 = Very much like me

1. I am good at resisting temptation.
2. I have a hard time breaking bad habits. (R)
3. I am lazy. (R)
4. I say inappropriate things. (R)
5. I do certain things that are bad for me, if they are fun. (R)
6. I refuse things that are bad for me.
7. I wish I had more self-discipline. (R)
8. People would say that I have iron self-discipline.
9. Pleasure and fun sometimes keep me from getting work done. (R)
10. I have trouble concentrating. (R)
11. I am able to work effectively toward long-term goals.
12. Sometimes I can't stop myself from doing something, even if I know it is wrong. (R)
13. I often act without thinking through all the alternatives. (R)

Scoring method: Reverse items 2, 3, 4, 5, 7, 9, 10, 12 and 13: scored_i = 6 - response_i. Score = mean of all 13 scored values. Valid output: 1-5.

Block C - Hedonic motives [adapted]

Backend field: hedonic_score

Response scale: 1 = Strongly disagree; 7 = Strongly agree

1. Shopping is usually a joy for me.
2. I often keep shopping not because I have to, but because I want to.
3. Shopping usually feels like an escape for me.
4. Compared with other things I could do, time spent shopping is genuinely enjoyable.
5. I enjoy being immersed in exciting new products.
6. I enjoy shopping for its own sake, not just for what I buy.
7. I have a good time shopping because I can act on the spur of the moment.
8. When I shop, I feel the excitement of the hunt.
9. When I shop, I can forget my problems for a while.
10. I feel a sense of adventure when I shop.
11. Shopping is usually not a very nice way to spend time. (R)

Scoring method: Reverse item 11: $\text{scored_11} = 8 - \text{response_11}$. Score = mean of all 11 scored values. Valid output: 1-7.

Block D - Utilitarian motives [adapted]

Backend field: utilitarian_score

Response scale: 1 = Strongly disagree; 7 = Strongly agree

1. I usually accomplish just what I wanted to on a shopping trip.
2. I often can't buy what I really need. (R)
3. When I shop, I usually find just the item(s) I was looking for.
4. I'm often disappointed because I have to go to another store to complete my shopping. (R)

Scoring method: Reverse items 2 and 4: $\text{scored_i} = 8 - \text{response_i}$. Score = mean of all four scored values. Valid output: 1-7.

Block E - Normative evaluation

Backend field: normative_eval_score

Response scale: Use one consistent five-point semantic-differential scale for every pair. Example: 1 = unfavourable adjective; 5 = favourable adjective.

1. Scenario: Mary has \$25 left for necessities two days before payday, needs socks, then sees a \$75 sweater on sale. Ask the respondent to imagine she buys both the socks and the unplanned sweater.
2. Rate the decision: good - bad
3. Rate the decision: wasteful - productive
4. Rate the decision: smart - stupid
5. Rate the decision: acceptable - unacceptable
6. Rate the decision: generous - selfish
7. Rate the decision: sober - silly
8. Rate the decision: mature - childish
9. Rate the decision: right - wrong

Scoring method: Configure each pair so a larger stored value always means a more favourable evaluation of the impulse purchase. Reverse any UI pair whose favourable adjective is shown on the left: $\text{scored_i} = 6 - \text{response_i}$. Score = sum of the 8 scored pairs. Valid output: 8-40. Store both the displayed polarity and raw answer for every pair.
